

## Biology Field Trip - The symbiotic world

F.5 Biology students participated in a field trip course at Ho Koon Nature Education cum Astronomical Centre on 6 October 2022. With a close and interesting relationship, plants and insects are the two types of living organisms with the highest biodiversity in the world. In the HKNEAC Organic Garden, students have found different symbiotic relationships and witnessed these wonderful but overlooked ecologies with a dissection microscope. They have learnt about the ecosystem and how to conserve the environment.
