

## Biology Field Trip: Exploring Habitats at Cheung Chau

Our F.5 Biology students recently embarked on an educational field trip to Cheung Chau. During the trip, they had the opportunity to study and observe diverse habitats, including the rocky shore, grassland, and woodland areas. Engaging in data collection and specimen analysis, students deepened their understanding of various biological concepts.

Through this immersive experience, our students gained valuable knowledge about different habitats and the interconnections within nature. They also developed an appreciation for the significance of preserving the delicate balance between humans and wildlife.

The Biology field trip to Cheung Chau proved to be an enriching experience, fostering a greater understanding of the natural world and inspiring a sense of responsibility towards its conservation.
