

STEAM for Community:

iGEM Biotechnology Workshop at Holy Cross Lutheran School

To promote STEAM education in the community, Biology Department Head Ms. Wendy Leung led students to Holy Cross Lutheran School on May 23 to host a DNA card game booth and a banana DNA extraction workshop. The DNA card set was designed and developed by our school's iGEM team students, aimed at teaching players about DNA base pairing. All primary six students from Holy Cross Lutheran School participated in the banana DNA extraction experiment, which enhanced their interest in science. Additionally, this activity allowed our students to learn through service, enriching their learning experiences and providing them with significant benefits.
