

Sharing of Successful Showcases on Learning and Teaching **related to Information Technology**

The Chairperson of our STEAM Committee, Ms. Leung Hoi Yan Wendy, was recently invited by the Digital Policy Office to be a seminar speaker at the Learning & Teaching Expo 2026 on 25 June 2026 at the Hong Kong Convention and Exhibition Centre, sharing our school's outstanding success in implementing digital education.

At the seminar, titled "STEAM For All lessons – Creative robot coding," Ms. Leung demonstrated how our school successfully democratized robot coding, making it an engaging and accessible experience for all Secondary 2 students. She shared valuable insights into our school's structured professional development and collaborative lesson preparation, which effectively equipped teachers to deliver the curriculum.

Furthermore, Ms. Leung highlighted how the curriculum seamlessly balances catering to student diversity with promoting gifted education. Through carefully structured, differentiated learning tasks, the program supports struggling learners while simultaneously offering advanced challenges that unleash the potential of high-ability students.

Being invited by the Digital Policy Office to share our experience fully demonstrates that the development of our innovative school-based technology and interdisciplinary STEAM curriculum is highly recognized by the industry. Our school will continue to broaden access to technology education and nurture more innovative talents for society!
