

Hong Kong Science Fair 2025-2026

Our school's team—comprising 4C Cai Tsz Yui Dominic, 4D Lau Lap Kan Kenneth, 4D Kan Wai Cho Carson, and 4D Shi Chun Wang Kyle—won the Merit Award and a HK\$5,000 Student Development Fund prize at the Hong Kong Science Fair 2025–2026. Their innovative green technology project, “Algae Bio-Breath Lamp”, which converts algae into electrical energy, received high praise from both the judging panel and the public.

The Hong Kong Science Fair, organised by the Hong Kong Innovation Foundation, concluded recently. This annual large-scale innovation and technology education event upholds the spirit of “Think Big, Be Innovative”, aiming to encourage the younger generation to apply science and creativity to solve everyday problems such as climate change and environmental pollution, while providing primary and secondary school students across Hong Kong with a broad platform to showcase their creativity to the public.

Heartfelt congratulations to all the winning students!
